|-------------------------------------------------------------------------------------------------------------------------|----|
| CONTENTS .....                                                                                                          | 4  |
| INTRODUCTION .....                                                                                                      | 6  |
| CHAPTER 1: FOUNDATIONS OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING IN FINANCE .....                                 | 10 |
| 1.1. Framing the tools for data-driven decision-making.....                                                             | 10 |
| 1.2. Defining artificial intelligence and machine learning in financial contexts .....                                  | 10 |
| 1.3. Data sources, preparation, and quality considerations.....                                                         | 12 |
| 1.4. Core modeling approaches .....                                                                                     | 19 |
| 1.4.1. Machine learning: Classification and regression approaches.....                                                  | 21 |
| 1.4.2. Deep learning and reinforcement learning .....                                                                   | 23 |
| 1.4.3. Hybrid models and ensemble techniques .....                                                                      | 25 |
| 1.5. Interpretability, governance, and regulatory principles .....                                                      | 28 |
| CHAPTER 2: ARTIFICIAL INTELLIGENCE APPLICATIONS IN FINANCE: AN OVERVIEW .....                                           | 36 |
| 2.1. Using artificial intelligence/machine learning to drive forecasts, adaptivity, and risk responses.....             | 36 |
| 2.2. Artificial intelligence in asset management.....                                                                   | 36 |
| 2.2.1. Robo-advisors and personalized investment services.....                                                          | 41 |
| 2.3. Artificial intelligence in trading strategies and market operations.....                                           | 43 |
| 2.4. Artificial intelligence for credit risk and scoring innovations .....                                              | 50 |
| 2.4.1. Advanced feature engineering and data integration .....                                                          | 51 |
| 2.4.2. Machine learning models in credit scoring.....                                                                   | 52 |
| 2.4.3. Behavioral monitoring and early warning systems .....                                                            | 54 |
| 2.4.4. Artificial intelligence in alternative and platform-based lending.....                                           | 55 |
| 2.4.5. Bias, fairness, and regulatory obligations .....                                                                 | 57 |
| 2.4.6. Institutional governance and model management.....                                                               | 59 |
| 2.5. Operational efficiency and automation with artificial intelligence.....                                            | 60 |
| 2.6. Artificial intelligence in financial forecasting and risk modelling: From market volatility to systemic risk ..... | 61 |
| CHAPTER 3: ARTIFICIAL INTELLIGENCE AND ESG INTEGRATION IN SUSTAINABLE FINANCE.....                                      | 64 |
| 3.1. Embedding ESG signals in data-driven financial frameworks.....                                                     | 64 |
| 3.2. Sustainable finance: The role of artificial intelligence and machine learning.....                                 | 64 |
| 3.3. ESG metrics in portfolio screening and evaluation .....                                                            | 67 |
| 3.4. ESG factors and performance assessment.....                                                                        | 70 |
| 3.5. ESG data challenges and market demand .....                                                                        | 72 |
| 3.6. Applications in risk management and ESG-related opportunities .....                                                | 75 |

|                                                                                     |    |
|-------------------------------------------------------------------------------------|----|
| CHAPTER 4: MANAGING COMPLEXITY, RISK, AND ETHICAL CONSIDERATIONS.....               | 79 |
| 4.1. Navigating complexity, uncertainty, and ethical design.....                    | 79 |
| 4.2. Complexity in AI-enabled financial systems .....                               | 79 |
| 4.3. Artificial intelligence for volatility, adaptation, and market stability ..... | 82 |
| 4.4. Ethical and societal implications of artificial intelligence in finance.....   | 85 |
| 4.5. Systemic risks, regulatory trends, and future directions .....                 | 87 |
| CONCLUSION .....                                                                    | 91 |
| REFERENCES.....                                                                     | 93 |
