Research activity

The research activity was carried out with regard to three main strands:

- Financial statements and consolidated financial statements.
- In this context, the issues related to the financial statements as well as the consolidated financial statements and national and international accounting standards were examined in depth, with particular regard to the balance sheet analysis. With regards to the financial statements, the issues concerning the new national accounting standards, their first application and the international accounting harmonization process were examined in detail.

The results of the research activity are partly contained in publication n. 5 of the list in the "Publications" section as well as in the three editions of the "TOP 500 - Parma" project published as an insert in the local newspaper. In detail, the TOP 500 project offers an analysis of the top 500 companies by turnover in the province of Parma and involves, alongside them, skills specific to professional and academic activity. The analysis was carried out on the financial statements closed

on 31.12.2014 - 31.12.2015 and 31.12.2016.

- Related Party Transactions.

The analysis of the theme of transactions with related parties was carried out using both qualitative research methodologies, more focused on investigating the disclosure provided on these transactions, and resorting to quantitative research methodologies, aimed at deepening the implementation of any policies balance.

The results of the research are contained in publications n. 1 and n. 2 of the list in the "Publications" section.

- Corporate Governance.

The corporate governance structure was deepened with regard to both the characteristics of the administrative body and the control body. The relationship between these characteristics and any budgetary policies has been studied mainly through the use of quantitative methodologies.

The results of the research are contained in publications n. 3, n. 4 and n. 6 of the list in the "Publications" section.

At the same time, the research projects currently in progress continue, as a general rule, as previously studied, with the aim of deepening different aspects.

With reference to the research topic linked to the annual and consolidated financial statements, two working papers are in place:

- Social and environmental information and graphs' distortion: can they really impress the investors and manage their decisions?
- Social and environmental information and pictures distortion: can they really impress the investors and manage their decisions?

With regard to transactions with related parties, the aim is to further explore the issue of disclosure and the key role of managing directors:

- Related Party Transactions Disclosure and Procedures: a Critical Analysis.
- Related Party Transactions and CEO Successor in Family Firms.

Focusing on the corporate governance structure, we want to study the links between the characteristics of corporate governance and, by way of example, the corporate dimension, internal group exchanges and social reporting. Some working papers:

- Corporate governance structure in SME: Family vs non-Family firms.
- Corporate governance structure and intra-group transactions.
- Quality in the CSR Reports and Corporate Governance structure.
- Crisi d'impresa e caratteristiche di Corporate Governance.
- Does Gender Diversity on Independent Audit Committees Constrain Earnings Management? Analysis in the Italian and US firms.
